Papers Celebrating the 80th Birthday of Professor ANDRZEJ WARCHAŁOWSKI

PROFESSOR ANDRZEJ WARCHAŁOWSKI - A SHORT BIOGRAPHY

Prof. dr hab. Andrzej Warchałowski was born in 1927. He finished secondary school in 1947 and started studying at the Jagiellonian University, then at the University of Wrocław, where he got engineer's diploma in chemistry (1950) and as a biologist a Master's diploma in philosophy (1951). Prof. Warchałowski obtained the degree of doctor of natural sciences in 1961, habilitation degree in 1975, and the professor's title in 1985. Until 1965 he was employed in industry (electronics and sugar production), and from 1966 until retirement - at the University of Wrocław, first as assistant professor, then as an associate professor, extraordinary and ordinary professor. During two consecutive terms he was director of the Zoological Institute. From 1985-1987 he worked as professor at the University of Sétif (Algeria), then he returned to the University of Wrocław to become the head of the Department of Systematic of Animals and Zoogeography (now Department of Biodiversity and Evolutionary Taxonomy), and he retired ten years later.

Professor Warchałowski was interested in natural history since his early youth. He started his first beetle collection as a boy of fourteen. His first collection was destroyed in 1942 during the Warsaw Uprising. The second collection, established in 1945, exists until now. At first it included all Central European beetles, then was limited to the family *Chrysomelidae* of the Palaearctic and Oriental regions. Materials for his studies and collection were accumulated during long-term trips to Vietnam (1961/1962), Iran (1962/1963, 1965/66, 1968/68, 1970/71), Greece (1964) and Morocco (1963/1965), and during some 25 shorter, usually one-month visits to the Balkan Peninsula, Asia Minor and various Mediterranean countries. Being a member of the Polish Entomological Society since early post-war years, Professor Warchałowski took an active part in the activities of the Society, as the first president of the coleopterological section, later as the editor of the *Polskie Pismo Entomologiczne* (Polish Journal of Entomology) and the "Keys to the identification of Polish Insects", then for three consecutive terms as its president and vice-president.

He is a honorary Member of the Polish Entomological Society, a Charter Member of the Polish Taxonomical Society, a member of the Organising Committee of the Symposium for Entomofauna of Central Europe (until 1992 as a representative of Central-East European countries) and a member (since 1997 a delegate) of the *Asociación Europea de Coleopterología*. He published a dozen articles and 79 scientific papers. The most important of these include the three volume key to the identification of chrysomelid beetles of Poland (1971-1978), the seven-volume monograph of chrysomelids in the series *Fauna of Poland* (1985-2000), the review of western-Palaearctic species of the genus *Longitarsus* (1996), and his *opus magnum* - the key to the *Chrysomelidae* of Europe and the Mediterranean area (2003).
