

## KEY TO SPECIES

### GENUS *PSALIDOMA*

1. Body elongate-oval, length/width ratio 1.47-1.63.  
..... 2.
- Body stout, subtrapezoidal, length/width ratio 1.31-1.45.  
..... 3.
2. Elytra only slightly elevated in postscutellar point, postscutellar impression shallow.  
Punctures on clypeus dense but without tendency to coalesce, surface of clypeus  
does not appear rugose.  
..... *P. holubi*
- Elytra distinctly elevated in postscutellar point, postscutellar impression deep. Punc-  
tures on clypeus very dense, surface of clypeus appears irregular.  
..... *P. oblonga*
3. Postscutellar tubercle high, angulate in profile.  
..... *P. knirschi*
- Postscutellar tubercle low, obtuse in profile.  
..... *P. contracta*
